V. Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

1. Statement

Novelty (N)	Claims	1 - 11	YES
	Claims	NONE	NO
Inventive step (IS)	Claims	NONE	YES
	Claims	1 - 11	NO
Industrial applicability (IA)	Claims	1 - 11	YES
	Claims	NONE	NO

2. Citations and explanations (Rule 70.7)

Reference is made to the following document:

D1 : KR 2001-18906 A (Hynix Semiconductor Inc.)

The present invention according to claims 1-11 relates to an organic anti-reflective composition, a patterning method using the same and a semiconductor device prepared by using the same patterning method. This organic composition comprises a crosslinking agent(A), a light absorbing agent(B), a thermal acid generator(C), an organic solvent(D) and an adhesivity enhancer(E).

Document D1 is considered to represent the most relevant state of the art, discloses an organic polymer for preventing anti-reflection comprising a polymer of formula 1 as a crosslinking agent(a), a polyvinylphenol of formula 6 as a photo-absorbing agent(b), a thermal acid generator of formula 7(c) and an organic solvent(d).

(Continued on Supplemental Box.)

PCT/KR2003/002479

Supplemental Box

(To be used when the space in any of the preceding boxes is not sufficient)

Continuation of:

BOX V.

Comparing the present invention with D1, both inventions are the same in preparing an organic anti-reflective composition comprising a crosslinking agent, a light absorbing agent, a thermal acid generator, and an organic solvent.

An adhesivity enhancer(E) in the present invention is used for effectively solving the standing wave effect and significantly preventing pattern collapse of photosensitizer on top of the organic anti-reflective film. However, it can be already used in the document D1 as a photo-absorbing agent or light-absorbing agent. And the (B) component is also a light-absorbing agent. So, it is obvious for the person skilled in the art that the (B) and (E) components in the present invention can be chosen together as a light absorbing agent.

Also, a thermal acid generator(C) in the present invention is same in the role of generating a thermal acid, comparing with (c) in document D1. It is also obvious for the person skilled in the art that a thermal acid generator can be used as a catalyst even if the chemical structure is slightly different.

So, claims 1-11 are trivial and not capable of supporting the requirements of inventive step under PCT Article 33(3).

Consequently, claims 1-11 are novel and also appear to be industrially applicable, but not inventive.
